Subject: KAM OID Optical Interface Detector

Dear Kim,

COLONIAL PIPELINE COMPANY has installed several KAM OID Optical Interface Detectors. The OID has proven to be a very useful tool in COLONIAL'S Automation Project.

To date, the KAM OID has not only detected the product interfaces of Amoco premium to standard premium, and low sulfur to high sulfur diesel, it has also exhibited the ability to accurately sense optical changes in every interface it has seen since installation, including differential RVP's, which are undetectable by densitometer.

KAM CONTROLS' personnel has provided unparalleled support for the installation, start-up, training, operation, and testing of their instruments. It has been a pleasure to work with Kam's staff.

Best Regards,

Tim Harbert
Automation & Measurement Team Leader
COLONIAL PIPELINE COMPANY

*Thanks for all
your help solving some
difficult problems!*
Tim
